Elite

Imagine...

Combining the power of a BQ Production and Estimating system.

Being able to re-use tender or final account costs in your Budget Estimates.

Being able to copy data at high level and then tailor the detailed data to suit your project.

Having your own cost database with all of your cost information at your fingertips all of the time.

... imagine no more,

organise your demonstration of Masterbill Elite today and see how we are turning your dreams into reality.

Masterbill

MASTERBILL ELITE...

harnesses the power of the latest Windows tools and Microsoft SQL to enable users to input and process data in a fraction of the time taken by previous Masterbill or rival systems. Masterbill Elite is a true 32-bit multi-user system designed to take advantage of the latest operating system and database technologies.

A DYNAMIC INDUSTRY DEMANDS IT THAT DELIVERS

As the roles within the Construction industry change, so do the demands on the software it uses. Timescales are becoming increasingly tighter, and the clearly defined roles of those involved in the Procurement and Costing of a construction project are becoming ever more distorted.

Whilst it is accepted that IT has the potential to meet the challenge by providing both the flexibility and time savings required a number are left asking "When will IT deliver?"

Masterbill have been designing, developing, implementing and supporting Specialist Construction Industry Software since 1981. By combining this extensive experience with the very latest technology Masterbill have met the challenge to deliver the optimum construction cost information system... **Masterbill Elite.**

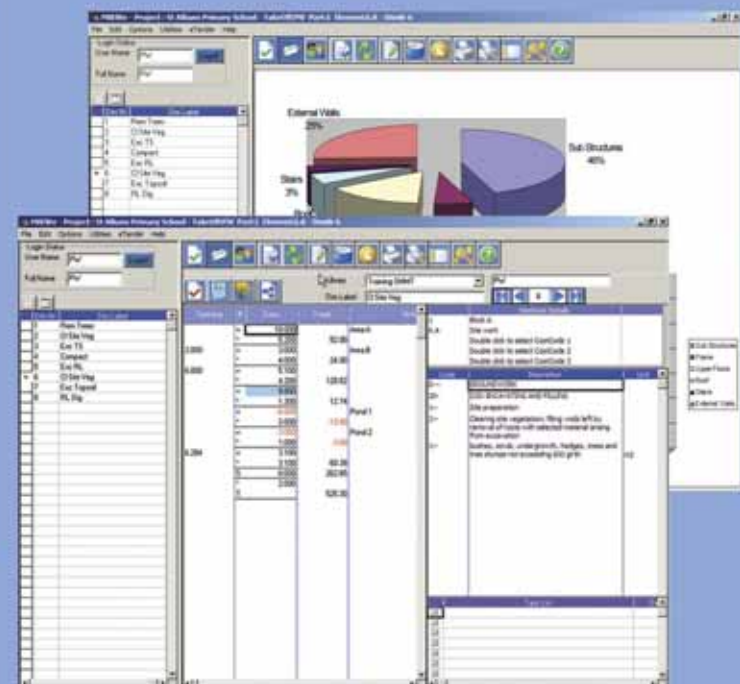

MASTERBILL ELITE A 21ST CENTURY SOLUTION

By combining the functionality of a number of individual products **Masterbill Elite** provides the complete solution for the construction industry in the 21st century.

Masterbill Elite combines ...

- The freeform flexibility of a **Word Processor** for Preliminaries, Preambles, Schedules of Work etc.
- The central database, search and adjustment facilities of a **Cost Planning** system
- The standard library, full sortation, dimsheets, dynamic dims and eTendering facilities of a **BQ Production** system
- The importation, priced library, freeform BQs, sub-contract packaging and adjustment facilities of an **Estimating** system
- The forecasting facilities of a **Cash Flow** system
- The speed & accuracy of a **CAD Measurement** system
- The re-use, adjustment and monitoring of pre-contract data of a **Post Contract** system

... in a single product with a single database.

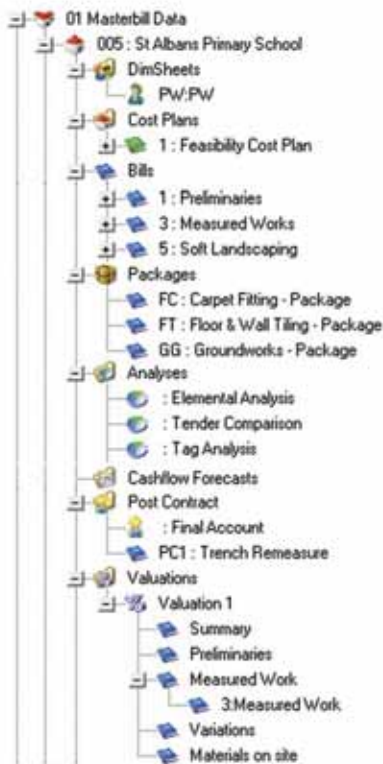

A MODULAR APPROACH

Masterbill Elite has been designed and developed in a number of function orientated modules which individually provide a comprehensive functional solution and collectively provide the optimum Construction Cost Information System.

This approach enables users to purchase the modules that match their initial budget and/or requirements whilst providing the reassurance that additional modules can be seamlessly integrated to meet their future requirements.

MASTERBILL ELITE MODULES

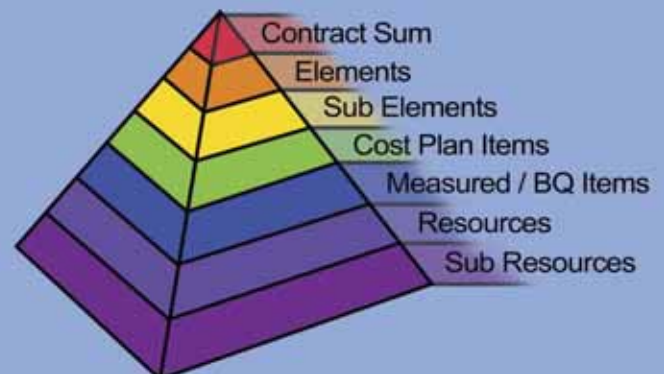

A DATA STRUCTURE THAT UNLOCKS YOUR MOST VALUABLE ASSET ... YOUR COST DATA.

Masterbill Elite makes use of the natural data structure for a Construction Project enabling users to view, use and manipulate available historical data at any level within the structure simultaneously delivering a reduction in time and an increase in accuracy.

Masterbill Elite users will be able to:

- Re-use cost and/or quantity data from previous Budget Estimates, Cost Plans, BQs, or Final Accounts
- Adjust quantities by Gross Floor Area, Element Unit Quantities or key dimensions.
- Adjust prices by Tender Price Index, Location or Custom factors.
- Review the effect of a cost fluctuation for a key resource.
- Produce accurate Cash Flow Forecasts by combining Cost and Programme data.
- Navigate seamlessly between data and drawings.
- Produce, manage and maintain their own cost database without doing any additional work.

PROJECT DATA PYRAMID

"Make sure all your cost data is at your fingertips all the time."

MASTERBILL MICRO SYSTEMS LTD.

Established in 1981, Masterbill developed the World's first Bill of Quantities application for the PC. Today, Masterbill software is acclaimed by users as the standard for QS systems. This leadership extends across software both for billing and estimating applications in the construction industry... as a result of Masterbill thinking beyond products to the entire solution. Other examples of this thinking include CAD measurement and eTendering. Working closely with their broad customer base Masterbill will continue to develop IT solutions that deliver real benefit to the Construction Industry.

CASE STUDY

What do you do if your client calls first thing Monday morning and says...

"I need some costs for a scheme I am considering similar to the one we did last year but with a GFA of 2,000m² rather than 1,200m². I have arranged a Design Team Meeting for tomorrow please can you come with the necessary costings."

Masterbill Elite users simply create a Cost Plan copying elements from the previous project and adjusting for changes in the GFA and TPI thus creating a cost plan including all the relevant detailed cost information in a very short time.

Masterbill Elite users will then be equipped to quickly and easily be able to provide answers to any questions/changes raised by the design team such as:

"What difference does it make to the costs if we use non-slip tiles in the toilets?"

"What is the area you have allowed for the workshop?"

"What sort of Windows have you allowed for?"

Insert your question here

MASTERBILL ELITE ENABLES THE INTERROGATION AND MANIPULATION OF DATA IN AN INSTANT.

SEEING IS BELIEVING!

If you would like to see how Masterbill Elite will give you time to think, take a look at the online demos on our website or contact us to arrange for us to provide a full demonstration either online or in your offices.

FURTHER POSSIBILITIES

Once the cost data is stored in the natural data structure used by Masterbill Elite this opens up a number of other possibilities including:

- Cost Analysis, Comparison and Bench Marking
- Cash Flow forecasting, monitoring and manipulation
- Sub Contract Packaging and Comparisons
- Integrated CAD Measurement and eTendering facilities

HOW MUCH?

A SYSTEM THAT WON'T BREAK THE BANK

With an extremely flexible modular approach and concurrent licensing flexibility Masterbill will be pleased to provide you with the solution that is tailored to best suit your budget and/or requirements.
